

**Wood Finish from Whey**

PolyWhey™ wood finishes from Vermont Natural Coatings are formulated using whey protein, a natural by-product of the dairy industry, as the bonding agent. The finishes are very low in volatile organic compounds (VOCs) — at or below 180 grams per liter — helping protect indoor air quality. These scratch-resistant clear finishes cure twice as hard as the average water-based finish and do not yellow in UV light. Excellent flow and great coverage. Dry in two to three hours. Available for floors or furniture. Can contribute to LEED credits.
